

conscious

Empowering minds. Elevating humanity.

A transformational technology platform designed to elevate human consciousness by reducing negative stress and improving mental and emotional wellbeing through AI-driven meditation and biofeedback.

Conscious users learn to quiet their minds with the help of our customized, gamified training exercises.

This skill becomes an exciting daily practice as users witness their own real-time progress in stress reduction through biometric feedback, while earning cryptocurrency rewards and gaining social support for changing their lives in this powerful way.

Free

More users acquired and wider adoption

Meditate

Eliminate stress through AI guidance

Track

Biometric feedback with no external hardware

Grow

Become more mentally and emotionally resilient

Earn

Earn cryptocurrency rewards as you level up

Give

Elevate the world as you elevate your mind

the global problem

A stressed-out world

In today's stressful world, our minds are pulled in all directions. This leaves us feeling unfocused and incomplete throughout the day.

Over time, chronic stress undermines our potential, diminishes productivity, shreds our attention, and places strain on our closest relationships.

the perfect solution

A next-generation global platform

Meditation can reverse the effects of stress by increasing focus, strengthening positive emotional states, and improving self-awareness in relationships.

Conscious provides a global platform for biofeedback meditation products in a multitude of different industries.

The front facing camera automatically tracks your mental and emotional wellbeing.

All you need is your smartphone.

Rewards Cryptocurrency Rewards

Using our "Proof of Meditation" technology, Conscious is the first mind-training platform to incentivize user progress through cryptocurrency.

Philanthropy Collective Transformation

We partner with beneficial global causes to empower our users to donate a portion of their in-app earnings to support a project or charity of their choosing.

Biometrics Smart Progress Tracking

Our platform tracks clinically-proven biometrics, including Heart Rate Variability and Respiratory Rate, to measure the user's bioindividual progress in reducing their levels of stress.

AI Driven Biofeedback Smart Personalized Guidance

Instead of a one-fits-all training track towards any particular training objective, our platform offers real-time, AI-driven biofeedback and personalized guidance based on the user's metrics and preferences.

Gamification Making It Fun

In partnership with global leaders in gamification, our products offer an immersive user journey that is designed to engage and motivate users towards their highest potentials.

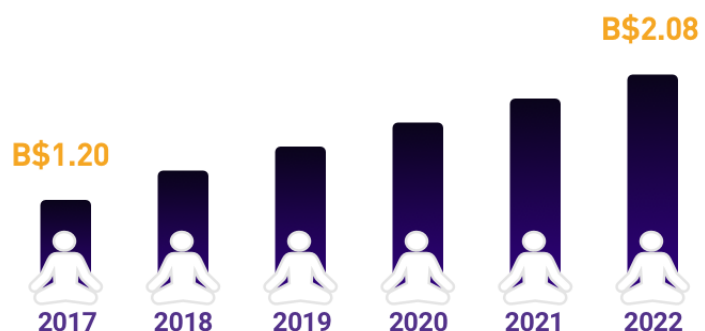

Social We're In This Together

We match up live meditation partners, and users can earn even greater rewards for meditating in groups or getting together to meditate in person. Social support encourages users to generate a meditation habit.

Market Potential

meditation is about to explode in America! In 4-5 years this will be a trillion-dollar business.

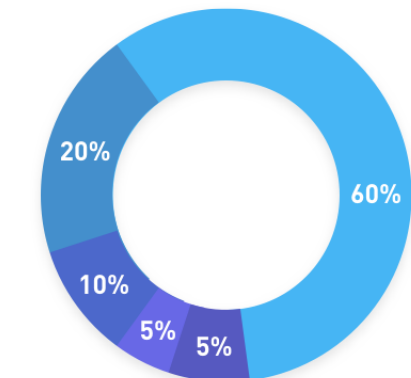

Gary Vaynerchuk

In 2017, the U.S. meditation industry generated \$1.2 billion in revenue and is projected to grow at an annual rate of 11.4 percent, reaching \$2.08 billion in revenue in 2022 (Source: Marketgate Enterprises)
